

## Link Instruments MSO-28 OSX Installation (Beta version)

### Installation instructions for OSX Yosemite (Beta)

This intaller has two parts.

Part 1: Install the hardware device driver. You only need to do this once. You don't need to do it when you update the software.

Part 2: Install the software GUI.

**NOTE: Please install the driver and software before connecting the hardware.**

### Part 1: Install Silicon Labs driver.

1. Run the Silicon Labs DMG file.	Download and run "SiLabsUSBDriverDisk_4.x.4.dmg"
2. Open the virtual drive created on the desktop	
3. Run "Silicon Labs VCP Driver.pkg"	
4. Follow the directions on the next few screens and click close at the end.  Eject the virtual disk.	

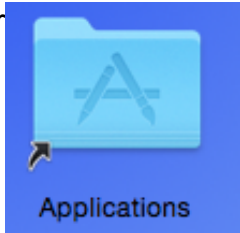

### Part 2: Install software GUI.

1. Run MSO-28 OSX installer	Download and run "MSO-28 installer.dmg"
2. Drag the MSO icon	

to the

Applications  
folder

## ***MSO-28 OSX installer***

1. Install the MSOAPP by dragging the  
ICON to Applications.

2. Connect the MSO-28 to the  
computer.

3. Close the installer.

Eject the MSO virtual  
disk from the desktop.

The MSO software is  
installed and can be  
found in Applications
